Introduction

① Sequences

② Solutions

CHAPTER 1

1.1 CONVERGENCE

The infinite is only strange until you learn to count it.

AUTHOR, WORK

Sequences

SECTION 1.1	<i>Convergence</i>
DEFINITION 1.1.1	Convergent sequence. <i>A sequence (a_n) converges to L if for every $\varepsilon > 0$ there is N with $a_n - L < \varepsilon$ for all $n \geq N$.</i>
THEOREM 1.1.2	Bolzano–Weierstrass. <i>Every bounded sequence of real numbers has a convergent subsequence.</i>
PROOF	Bisect the interval, and keep a half that holds infinitely many terms. ■
EXAMPLE 1.1.3	$a_n = 1/n$ converges to 0.

FIGURE 1.1 A full-width figure, between two hairlines.

	1.1.1. Prove that $1 + 1 = 2$.
